

Recombinant Human NKX2-1 Protein, GST-tagged

Cat. No. NKX2-1-02H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human NKX2-1 (56-147) protein with a N-terminal GST-tag was expressed in Wheat Germ(in vitro).
Species	Human
Source	Wheat Germ
ProteinLength	56-147
Description	This gene encodes a protein initially identified as a thyroid-specific transcription factor. The encoded protein binds to the thyroglobulin promoter and regulates the expression of thyroid-specific genes but has also been shown to regulate the expression of genes involved in morphogenesis. Mutations and deletions in this gene are associated with benign hereditary chorea, choreoathetosis, congenital hypothyroidism, and neonatal respiratory distress, and may be associated with thyroid cancer. Multiple transcript variants encoding different isoforms have been found for this gene. This gene shares the symbol/alias 'TTF1' with another gene, transcription termination factor 1, which plays a role in ribosomal gene transcription.
