

Recombinant Human PADI1 Protein, His-tagged

Cat. No. PADI1-011H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human PADI1 protein (2-663) with a N-terminal His-tag was expressed in E. coli
Species	Human
Source	E.coli
ProteinLength	2-663
Description	This gene encodes a member of the peptidyl arginine deiminase family of enzymes, which catalyze the post-translational deimination of proteins by converting arginine residues into citrullines in the presence of calcium ions. The family members have distinct substrate specificities and tissue-specific expression patterns. The type I enzyme is involved in the late stages of epidermal differentiation, where it deiminates filaggrin and keratin K1, which maintains hydration of the stratum corneum, and hence the cutaneous barrier function. This enzyme may also play a role in hair follicle formation. This gene exists in a cluster with four other paralogous genes.
