

Recombinant Human SIRT5 Protein, GST-tagged

Cat. No. SIRT5-25H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human SIRT5(33-310) protein with a N-terminal GST-tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	33-310
Description	This gene encodes a member of the sirtuin family of proteins, homologs to the yeast Sir2 protein. Members of the sirtuin family are characterized by a sirtuin core domain and grouped into four classes. The functions of human sirtuins have not yet been determined; however, yeast sirtuin proteins are known to regulate epigenetic gene silencing and suppress recombination of rDNA. Studies suggest that the human sirtuins may function as intracellular regulatory proteins with mono-ADP-ribosyltransferase activity. The protein encoded by this gene is included in class III of the sirtuin family. Alternative splicing of this gene results in multiple transcript variants.
