

Active Recombinant Human HSPA1A Protein, His-tagged

Cat. No. HSPA1A-012H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length human HSPA1A protein (2-641) with a N-terminal Histidine tag was purified from insect cells.
Species	Human
Source	Insect Cells
ProteinLength	2-641
Description	This intronless gene encodes a 70kDa heat shock protein which is a member of the heat shock protein 70 family. In conjunction with other heat shock proteins, this protein stabilizes existing proteins against aggregation and mediates the folding of newly translated proteins in the cytosol and in organelles. It is also involved in the ubiquitin-proteasome pathway through interaction with the AU-rich element RNA-binding protein 1. The gene is located in the major histocompatibility complex class III region, in a cluster with two closely related genes which encode similar proteins.
