

Active Recombinant Human ITGAVB3

Cat. No. ITGAVB3-103H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human ITGAVB3 protein (Human ITGAV & ITGB3) Phe31–Val992 (Integrin α V) and Gly27–Asp718(Integrin β 3) was co-expressed in CHO Cells.
Species	Human
Source	CHO
ProteinLength	31-992;27-718 a.a.
Description	ITAGV encodes integrin alpha chain V. Integrins are heterodimeric integral membrane proteins composed of an alpha chain and a beta chain. The I-domain containing integrin alpha V undergoes post-translational cleavage to yield disulfide-linked heavy and light chains, that combine with multiple integrin beta chains to form different integrins. Among the known associating beta chains (beta chains 1,3,5,6, and 8; "ITGB1", "ITGB3", "ITGB5", "ITGB6", and "ITGB8"), each can interact with extracellular matrix ligands; the alpha V beta 3 integrin, perhaps the most studied of these, is referred to as the Vitronectin receptor (VNR). In addition to adhesion, many integrins are known to facilitate signal transduction. Alternative splicing results in multiple transcript variants.
Molecular Mass	110.5 kDa (α V subunit), 80.8 kDa (β 3 subunit)
