

Recombinant Human HSF2, His-tagged

Cat. No. HSF2-7713H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Heat Shock Factor Protein 2/HSF2 is produced by our E. coli expression system. The target protein is expressed with sequence (Ser411Ser536) of Human HSF2 fused with a 6His tag at the Nterminus.
Species	Human
Source	E.coli
Description	Heat Shock Factor Protein 2 (HSF2) belongs to the HSF family of transcription factors that bind specifically to the heatshock promoter element and activate transcription. In higher eukaryotes, HSF is unable to bind to the HSE unless the cells are heat shocked. HSF2 is widely expressed in many cells and tissues. HSF2 is located on Cytoplasmic during normal growth. But when it is activated, HSF2 moves to the nucleus.
Form	Lyophilized from a 0.2 µM filtered solution of 20mM PB, 150mM NaCl, 1mM DTT, pH 7.2
