

Recombinant Human VPS29 Protein, MYC/DDK-tagged, C13 and N15-labeled

Cat. No. VPS29-013H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	VPS29 MS Standard C13 and N15-labeled recombinant protein (NP_057310) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene belongs to a group of vacuolar protein sorting (VPS) genes that, when functionally impaired, disrupt the efficient delivery of vacuolar hydrolases. The protein encoded by this gene is a component of a large multimeric complex, termed the retromer complex, which is involved in retrograde transport of proteins from endosomes to the trans-Golgi network. This VPS protein may be involved in the formation of the inner shell of the retromer coat for retrograde vesicles leaving the prevacuolar compartment. Alternative splice variants encoding different isoforms and representing non-protein coding transcripts have been found for this gene.
