

Recombinant Human CLEC4E, His-tagged

Cat. No. CLEC4E-7776H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CType Lectin Domain Family 4 Member E/CLEC4E is produced with our mammalian cells expression system in HEK293. The target protein is expressed with sequence (Arg41Leu219) of Human CLEC4E fused with a polyhistidine tag at the Cterminus.
Species	Human
Source	HEK293
Description	CType Lectin Domain Family 4 Member E (CLEC4E) is a 219 amino acid singlepass type II membrane protein that contains one Ctype Lectin domain. It is expressed in monocytes, CLEC4E functions as a downstream target of C/EBP beta and is thought to play a role in the inflammatory response, possibly via transcriptional control of C/EBP beta. CLEC4E may play a role in the response to inflammatory stimuli in peritoneal macrophages and may be involved in immune surveillance processes under transcriptional control of CEBPB. Human CLEC4E shares 67% sequence identity with its mouse counterpart, suggesting a similar function between species. CLEC4E exists as multiple alternatively spliced isoforms that are encoded by a gene which maps to a natural killer gene complex region on human chromosome 12.
