

Recombinant Human UNC45B Protein, MYC/DDK-tagged, C13 and N15-labeled

Cat. No. UNC45B-096H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	UNC45B MS Standard C13 and N15-labeled recombinant protein (NP_775259) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a co-chaperone required for folding and accumulation of type II myosins. The protein consists of three tetratricopeptide repeat motifs at the N-terminus that form a complex with heat shock protein 90, a central region of unknown function that is conserved in all Unc-45 proteins, and a C-terminal Unc-45/Cro1/She4 domain. The protein is expressed at high levels in striated muscle, where its muscle myosin chaperone activity is dependent on heat shock protein 90 acting as a co-chaperone. A missense mutation in this gene has been associated with cataract development. Alternative splicing results in multiple transcript variants.
