

Recombinant Human TAPBP Protein, MYC/DDK-tagged, C13 and N15-labeled

Cat. No. TAPBP-154H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	TAPBP MS Standard C13 and N15-labeled recombinant protein (NP_003181) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a transmembrane glycoprotein which mediates interaction between newly assembled major histocompatibility complex (MHC) class I molecules and the transporter associated with antigen processing (TAP), which is required for the transport of antigenic peptides across the endoplasmic reticulum membrane. This interaction is essential for optimal peptide loading on the MHC class I molecule. Up to four complexes of MHC class I and this protein may be bound to a single TAP molecule. This protein contains a C-terminal double-lysine motif (KKKAE) known to maintain membrane proteins in the endoplasmic reticulum. This gene lies within the major histocompatibility complex on chromosome 6. Alternative splicing results in three transcript variants encoding different isoforms.
Molecular Mass	47.63 kDa

Purity > 80% as determined by SDS-PAGE and Coomassie blue staining

Stability Stable for 3 months from receipt of products under proper storage and handling conditions.

Storage Store at -80 centigrade. Avoid repeated freeze-thaw cycles.

Concentration 50 µg/mL as determined by BCA

Storage Buffer 100 mM glycine, 25 mM Tris-HCl, pH 7.3.

GENE INFORMATION

Gene Name TAPBP TAP binding protein [Homo sapiens (human)]

Official Symbol TAPBP

Synonyms TAPBP; TAP binding protein; NGS17; TAPA; TPN; TPSN; tapasin; NGS-17; TAP binding protein (tapasin); TAP-associated protein

Gene ID 6892

mRNA Refseq NM_003190
