

Recombinant Human NFYB Protein, MYC/DDK-tagged, C13 and N15-labeled

Cat. No. NFYB-224H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	NFYB MS Standard C13 and N15-labeled recombinant protein (NP_006157) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is one subunit of a trimeric complex, forming a highly conserved transcription factor that binds with high specificity to CCAAT motifs in the promoter regions in a variety of genes. This gene product, subunit B, forms a tight dimer with the C subunit, a prerequisite for subunit A association. The resulting trimer binds to DNA with high specificity and affinity. Subunits B and C each contain a histone-like motif. Observation of the histone nature of these subunits is supported by two types of evidence; protein sequence alignments and experiments with mutants. [provided by RefSeq, Jul 2008]
