

Recombinant Human MYD88 Protein, MYC/DDK-tagged, C13 and N15-labeled

Cat. No. MYD88-272H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MYD88 MS Standard C13 and N15-labeled recombinant protein (NP_002459) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a cytosolic adapter protein that plays a central role in the innate and adaptive immune response. This protein functions as an essential signal transducer in the interleukin-1 and Toll-like receptor signaling pathways. These pathways regulate that activation of numerous proinflammatory genes. The encoded protein consists of an N-terminal death domain and a C-terminal Toll-interleukin1 receptor domain. Patients with defects in this gene have an increased susceptibility to pyogenic bacterial infections. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Feb 2010]
