

Recombinant Human RGS3 Protein, MYC/DDK-tagged, C13 and N15-labeled

Cat. No. RGS3-339H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	RGS3 MS Standard C13 and N15-labeled recombinant protein (NP_602299) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the regulator of G-protein signaling (RGS) family. This protein is a GTPase-activating protein that inhibits G-protein-mediated signal transduction. Alternative splicing and the use of alternative promoters results in multiple transcript variants encoding different isoforms. Long isoforms are largely cytosolic and plasma membrane-associated with a function in Wnt signaling and in the epithelial mesenchymal transition, while shorter N-terminally-truncated isoforms can be nuclear.
