

Recombinant Human RAD54L Protein, MYC/DDK-tagged, C13 and N15-labeled

Cat. No. RAD54L-390H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	RAD54L MS Standard C13 and N15-labeled recombinant protein (NP_001136020) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene belongs to the DEAD-like helicase superfamily, and shares similarity with <i>Saccharomyces cerevisiae</i> Rad54, a protein known to be involved in the homologous recombination and repair of DNA. This protein has been shown to play a role in homologous recombination related repair of DNA double-strand breaks. The binding of this protein to double-strand DNA induces a DNA topological change, which is thought to facilitate homologous DNA paring, and stimulate DNA recombination. Alternative splicing results in multiple transcript variants encoding the same protein. [provided by RefSeq, Dec 2008]
