

Recombinant Human GPLD1 Protein, MYC/DDK-tagged, C13 and N15-labeled

Cat. No. GPLD1-434H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GPLD1 MS Standard C13 and N15-labeled recombinant protein (NP_001494) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	Many proteins are tethered to the extracellular face of eukaryotic plasma membranes by a glycosylphosphatidylinositol (GPI) anchor. The GPI-anchor is a glycolipid found on many blood cells. The protein encoded by this gene is a GPI degrading enzyme. Glycosylphosphatidylinositol specific phospholipase D1 hydrolyzes the inositol phosphate linkage in proteins anchored by phosphatidylinositol glycans, thereby releasing the attached protein from the plasma membrane.
