

Recombinant Human ZBTB17, His-tagged

Cat. No. ZBTB17-7964H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Zinc Finger and BTB DomainContaining Protein 17/ZBTB17 is produced by our E. coli expression system. The target protein is expressed with sequence (Met1Ala188) of Human ZBTB17 fused with a His tag at the Cterminus.
Species	Human
Source	E.coli
Description	Zinc Finger and BTB DomainContaining Protein 17 (ZBTB17) belongs to the Kruppel C2H2type zinc finger protein family. ZBTB17 may function as a housekeeping DNAbinding protein that regulates the expression of specific genes, it has been shown to bind to the promoters of adenovirus major late protein and cyclin D1 and activate transcription. ZBTB17 may has growth arrest activity, probably through inhibition of cell cycle progression. ZBTB17 required for early embryonic development during gastrulation. ZBTB17 induces cell arrest at G1, an effect mediated by its activation of the gene coding for P15INK4b. This effect is blocked by Myc, which displaces transcriptional coactivators bound to ZBTB17. Although the downregulation of ZBTB17 may contribute to Mycinduced cell transformation, the deactivation of ZBTB17 is absolutely essential for Mycinduced apoptosis.
