

Active Recombinant Human ALDH1A1 Protein

Cat. No. ALDH1A1-111H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human ALDH1A1 protein without tag was expressed in E. coli.
Species	Human
Source	E.coli
Description	The protein encoded by this gene belongs to the aldehyde dehydrogenase family. Aldehyde dehydrogenase is the next enzyme after alcohol dehydrogenase in the major pathway of alcohol metabolism. There are two major aldehyde dehydrogenase isozymes in the liver, cytosolic and mitochondrial, which are encoded by distinct genes, and can be distinguished by their electrophoretic mobility, kinetic properties, and subcellular localization. This gene encodes the cytosolic isozyme. Studies in mice show that through its role in retinol metabolism, this gene may also be involved in the regulation of the metabolic responses to high-fat diet.
