

Active Recombinant Human FBN1 Protein, Fc-tagged

Cat. No. FBN1-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Fibrillin-1 (Ala25-Thr660) protein with Human IgG1 (Pro100-Lys330) Fc tag at C-terminus was expressed in Chinese Hamster Ovary cell line.
Species	Human
Source	CHO
ProteinLength	25-660 a.a.
Description	This gene encodes a member of the fibrillin family of proteins. The encoded preproprotein is proteolytically processed to generate two proteins including the extracellular matrix component fibrillin-1 and the protein hormone asprosin. Fibrillin-1 is an extracellular matrix glycoprotein that serves as a structural component of calcium-binding microfibrils. These microfibrils provide force-bearing structural support in elastic and nonelastic connective tissue throughout the body. Asprosin, secreted by white adipose tissue, has been shown to regulate glucose homeostasis. Mutations in this gene are associated with Marfan syndrome and the related MASS phenotype, as well as ectopia lentis syndrome, Weill-Marchesani syndrome, Shprintzen-Goldberg syndrome and neonatal progeroid syndrome.
Form	Disulfide-linked homodimer
Bio-activity	Measured by its binding ability in a functional ELISA. When Recombinant Human MFAP4 is immobilized at 0.5 µg/mL (100 µL/well), the concentration of Recombinant Human Fibrillin-1/FBN1 Fc Chimera that produces 50% of the optimal binding
