

Recombinant Human MAP4K2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MAP4K2-452H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MAP4K2 MS Standard C13 and N15-labeled recombinant protein (NP_004570) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a member of the serine/threonine protein kinase family. Although this kinase is found in many tissues, its expression in lymphoid follicles is restricted to the cells of germinal centre, where it may participate in B-cell differentiation. This kinase can be activated by TNF-alpha, and has been shown to specifically activate MAP kinases. This kinase is also found to interact with TNF receptor-associated factor 2 (TRAF2), which is involved in the activation of MAP3K1/MEKK1. Alternative splicing results in multiple transcript variants.
