

Recombinant Human ABI3 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ABI3-483H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ABI3 MS Standard C13 and N15-labeled recombinant protein (NP_057512) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of an adaptor protein family. Members of this family encode proteins containing a homeobox homology domain, proline rich region and Src-homology 3 (SH3) domain, and are components of the Abi/WAVE complex which regulates actin polymerization. The encoded protein inhibits ectopic metastasis of tumor cells as well as cell migration. This may be accomplished through interaction with p21-activated kinase. Alternative splicing results in multiple transcript variants.
