

Recombinant Human COMP Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. COMP-566H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	COMP MS Standard C13 and N15-labeled recombinant protein (NP_000086) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a noncollagenous extracellular matrix (ECM) protein. It consists of five identical glycoprotein subunits, each with EGF-like and calcium-binding (thrombospondin-like) domains. Oligomerization results from formation of a five-stranded coiled coil and disulfides. Binding to other ECM proteins such as collagen appears to depend on divalent cations. Contraction or expansion of a 5 aa aspartate repeat and other mutations can cause pseudoachondroplasia (PSACH) and multiple epiphyseal dysplasia (MED).
