

Recombinant Human PLPP3 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PLPP3-590H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PPAP2B MS Standard C13 and N15-labeled recombinant protein (NP_003704) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a member of the phosphatidic acid phosphatase (PAP) family. PAPs convert phosphatidic acid to diacylglycerol, and function in de novo synthesis of glycerolipids as well as in receptor-activated signal transduction mediated by phospholipase D. This protein is a membrane glycoprotein localized at the cell plasma membrane. It has been shown to actively hydrolyze extracellular lysophosphatidic acid and short-chain phosphatidic acid. The expression of this gene is found to be enhanced by epidermal growth factor in Hela cells.
