

Recombinant Human NAA60 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. NAA60-613H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	NAT15 MS Standard C13 and N15-labeled recombinant protein (NP_079121) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes an enzyme that localizes to the Golgi apparatus, where it transfers an acetyl group to the N-terminus of free proteins. This enzyme acts on histones, and its activity is important for chromatin assembly and chromosome integrity. Alternative splicing and the use of alternative promoters results in multiple transcript variants. The upstream promoter is located in a differentially methylated region (DMR) and undergoes imprinting; transcript variants originating from this position are expressed from the maternal allele.
