

Recombinant Human PKP1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PKP1-719H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PKP1 MS Standard C13 and N15-labeled recombinant protein (NP_001005337) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the arm-repeat (armadillo) and plakophilin gene families. Plakophilin proteins contain numerous armadillo repeats, localize to cell desmosomes and nuclei, and participate in linking cadherins to intermediate filaments in the cytoskeleton. This protein may be involved in molecular recruitment and stabilization during desmosome formation. Mutations in this gene have been associated with the ectodermal dysplasia/skin fragility syndrome. Two transcript variants encoding different isoforms have been found for this gene.
