

Recombinant Human KPNA7 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. KPNA7-728H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	KPNA7 MS Standard C13 and N15-labeled recombinant protein (NP_001139187) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The transport of molecules between the nucleus and the cytoplasm in eukaryotic cells is mediated by the nuclear pore complex (NPC), which consists of 60-100 proteins. Small molecules (up to 70 kD) can pass through the nuclear pore by nonselective diffusion while larger molecules are transported by an active process. The protein encoded by this gene belongs to the importin alpha family, and is involved in nuclear protein import, but exhibits different nuclear localization signal binding specificity compared to other members of the family. A pseudogene of this gene has been defined on chromosome 5.
