

Recombinant Human DIAPH1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. DIAPH1-852H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	DIAPH1 MS Standard C13 and N15-labeled recombinant protein (NP_005210) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene is a homolog of the Drosophila diaphanous gene, and has been linked to autosomal dominant, fully penetrant, nonsyndromic sensorineural progressive low-frequency hearing loss. Actin polymerization involves proteins known to interact with diaphanous protein in Drosophila and mouse. It has therefore been speculated that this gene may have a role in the regulation of actin polymerization in hair cells of the inner ear. Alternatively spliced transcript variants encoding distinct isoforms have been found for this gene.
