

Recombinant Human MOCS2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MOCS2-920H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MOCS2 MS Standard C13 and N15-labeled recombinant protein (NP_789776) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	Eukaryotic molybdoenzymes use a unique molybdenum cofactor (MoCo) consisting of a pterin, termed molybdopterin, and the catalytically active metal molybdenum. MoCo is synthesized from precursor Z by the heterodimeric enzyme molybdopterin synthase. The large and small subunits of molybdopterin synthase are both encoded from this gene by overlapping open reading frames. The proteins were initially thought to be encoded from a bicistronic transcript. They are now thought to be encoded from monocistronic transcripts. Alternatively spliced transcripts have been found for this locus that encode the large and small subunits.
