

Recombinant Human PTGDS Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PTGDS-993H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PTGDS MS Standard C13 and N15-labeled recombinant protein (NP_000945) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a glutathione-independent prostaglandin D synthase that catalyzes the conversion of prostaglandin H2 (PGH2) to postaglandin D2 (PGD2). PGD2 functions as a neuromodulator as well as a trophic factor in the central nervous system. PGD2 is also involved in smooth muscle contraction/relaxation and is a potent inhibitor of platelet aggregation. This gene is preferentially expressed in brain. Studies with transgenic mice overexpressing this gene suggest that this gene may be also involved in the regulation of non-rapid eye movement sleep.
