

Recombinant Human SHC1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. SHC1-1005H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	SHC1 MS Standard C13 and N15-labeled recombinant protein (NP_003020) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes three main isoforms that differ in activities and subcellular location. While all three are adapter proteins in signal transduction pathways, the longest (p66Shc) may be involved in regulating life span and the effects of reactive oxygen species. The other two isoforms, p52Shc and p46Shc, link activated receptor tyrosine kinases to the Ras pathway by recruitment of the GRB2/SOS complex. p66Shc is not involved in Ras activation. Unlike the other two isoforms, p46Shc is targeted to the mitochondrial matrix. Several transcript variants encoding different isoforms have been found for this gene.
