

Recombinant Human ANXA2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ANXA2-1086H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ANXA2 MS Standard C13 and N15-labeled recombinant protein (NP_001002857) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the annexin family. Members of this calcium-dependent phospholipid-binding protein family play a role in the regulation of cellular growth and in signal transduction pathways. This protein functions as an autocrine factor which heightens osteoclast formation and bone resorption. This gene has three pseudogenes located on chromosomes 4, 9 and 10, respectively. Multiple alternatively spliced transcript variants encoding different isoforms have been found for this gene. Annexin A2 expression has been found to correlate with resistance to treatment against various cancer forms.
