

Recombinant Human TGM1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. TGM1-1287H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	TGM1 MS Standard C13 and N15-labeled recombinant protein (NP_000350) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a membrane protein that catalyzes the addition of an alkyl group from an alkylamine to a glutamine residue of a protein, forming an alkylglutamine in the protein. This protein alkylation leads to crosslinking of proteins and catenation of polyamines to proteins. This gene contains either one or two copies of a 22 nt repeat unit in its 3' UTR. Mutations in this gene have been associated with autosomal recessive lamellar ichthyosis (LI) and nonbullous congenital ichthyosiform erythroderma (NCIE).
