

Recombinant Human DPYD Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. DPYD-1291H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	DPYD MS Standard C13 and N15-labeled recombinant protein (NP_000101) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a pyrimidine catabolic enzyme and the initial and rate-limiting factor in the pathway of uracil and thymidine catabolism. Mutations in this gene result in dihydropyrimidine dehydrogenase deficiency, an error in pyrimidine metabolism associated with thymine-uraciluria and an increased risk of toxicity in cancer patients receiving 5-fluorouracil chemotherapy. Two transcript variants encoding different isoforms have been found for this gene.
