

Recombinant Human PRH2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PRH2-1366H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PRH2 MS Standard C13 and N15-labeled recombinant protein (NP_005033) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the heterogeneous family of proline-rich salivary glycoproteins. The encoded preproprotein undergoes proteolytic processing to generate one or more mature isoforms before secretion from the parotid and submandibular/sublingual glands. In western population this locus is commonly biallelic and encodes proline-rich protein (PRP) isoforms, PRP-1 and PRP-2. The reference genome encodes the PRP-1 allele. Certain alleles of this gene are associated with susceptibility to dental caries. This gene is located in a cluster of closely related salivary proline-rich proteins on chromosome 12.
