

Recombinant Human PDGFA Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PDGFA-1392H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PDGFA MS Standard C13 and N15-labeled recombinant protein (NP_148983) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the protein family comprised of both platelet-derived growth factors (PDGF) and vascular endothelial growth factors (VEGF). The encoded preproprotein is proteolytically processed to generate platelet-derived growth factor subunit A, which can homodimerize, or alternatively, heterodimerize with the related platelet-derived growth factor subunit B. These proteins bind and activate PDGF receptor tyrosine kinases, which play a role in a wide range of developmental processes. Alternative splicing results in multiple transcript variants.
