

Recombinant Human TARDBP Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. TARDBP-1429H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	TARDBP MS Standard C13 and N15-labeled recombinant protein (NP_031401) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	HIV-1, the causative agent of acquired immunodeficiency syndrome (AIDS), contains an RNA genome that produces a chromosomally integrated DNA during the replicative cycle. Activation of HIV-1 gene expression by the transactivator Tat is dependent on an RNA regulatory element (TAR) located downstream of the transcription initiation site. The protein encoded by this gene is a transcriptional repressor that binds to chromosomally integrated TAR DNA and represses HIV-1 transcription. In addition, this protein regulates alternate splicing of the CFTR gene. A similar pseudogene is present on chromosome 20.
