

Recombinant Human GLA Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GLA-1509H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GLA MS Standard C13 and N15-labeled recombinant protein (NP_000160) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a homodimeric glycoprotein that hydrolyses the terminal alpha-galactosyl moieties from glycolipids and glycoproteins. This enzyme predominantly hydrolyzes ceramide trihexoside, and it can catalyze the hydrolysis of melibiose into galactose and glucose. A variety of mutations in this gene affect the synthesis, processing, and stability of this enzyme, which causes Fabry disease, a rare lysosomal storage disorder that results from a failure to catabolize alpha-D-galactosyl glycolipid moieties.
