

Recombinant Human CTSH Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CTSH-1619H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CTSH MS Standard C13 and N15-labeled recombinant protein (NP_004381) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a lysosomal cysteine proteinase important in the overall degradation of lysosomal proteins. It is composed of a dimer of disulfide-linked heavy and light chains, both produced from a single protein precursor. The encoded protein, which belongs to the peptidase C1 protein family, can act both as an aminopeptidase and as an endopeptidase. Increased expression of this gene has been correlated with malignant progression of prostate tumors. Alternate splicing of this gene results in multiple transcript variants encoding different isoforms.
