

Recombinant Human MS4A1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MS4A1-1649H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MS4A1 MS Standard C13 and N15-labeled recombinant protein (NP_068769) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the membrane-spanning 4A gene family. Members of this nascent protein family are characterized by common structural features and similar intron/exon splice boundaries and display unique expression patterns among hematopoietic cells and nonlymphoid tissues. This gene encodes a B-lymphocyte surface molecule which plays a role in the development and differentiation of B-cells into plasma cells. This family member is localized to 11q12, among a cluster of family members. Alternative splicing of this gene results in two transcript variants which encode the same protein.
