

Recombinant Human SDR16C5 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. SDR16C5-1709H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	SDR16C5 MS Standard C13 and N15-labeled recombinant protein (NP_620419) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the short-chain alcohol dehydrogenase/reductase superfamily of proteins and is involved in the oxidation of retinol to retinaldehyde. The encoded protein is associated with the endoplasmic reticulum and is predicted to contain three transmembrane helices, suggesting that it is an integral membrane protein. It recognizes all-trans-retinol and all-trans-retinaldehyde as substrates and exhibits a strong preference for NAD(+)/NADH as cofactors. Alternative splicing results in multiple transcript variants.
