

Recombinant Human ERP29 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ERP29-1732H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ERP29 MS Standard C13 and N15-labeled recombinant protein (NP_006808) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein which localizes to the lumen of the endoplasmic reticulum (ER). It is a member of the protein disulfide isomerase (PDI) protein family but lacks an active thioredoxin motif, suggesting that this protein does not function as a disulfide isomerase. The canonical protein dimerizes and is thought to play a role in the processing of secretory proteins within the ER. Alternative splicing results in multiple transcript variants encoding different isoforms.
