

Recombinant Human PBK Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PBK-1788H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PBK MS Standard C13 and N15-labeled recombinant protein (NP_060962) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a serine/threonine protein kinase related to the dual specific mitogen-activated protein kinase kinase (MAPKK) family. Evidence suggests that mitotic phosphorylation is required for its catalytic activity. The encoded protein may be involved in the activation of lymphoid cells and support testicular functions, with a suggested role in the process of spermatogenesis. Overexpression of this gene has been implicated in tumorigenesis. Alternative splicing results in multiple transcript variants.
