

Recombinant Human ALDH8A1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ALDH8A1-1807H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ALDH8A1 MS Standard C13 and N15-labeled recombinant protein (NP_072090) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the aldehyde dehydrogenase family of proteins. The encoded protein has been implicated in the synthesis of 9-cis-retinoic acid and in the breakdown of the amino acid tryptophan. This enzyme converts 9-cis-retinal into the retinoid X receptor ligand 9-cis-retinoic acid, and has approximately 40-fold higher activity with 9-cis-retinal than with all-trans-retinal. In addition, this enzyme has been shown to catalyze the conversion of 2-aminomuconic semialdehyde to 2-aminomuconate in the kynurenine pathway of tryptophan catabolism.
