

Recombinant Human TRIM68 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. TRIM68-1812H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	TRIM68 MS Standard C13 and N15-labeled recombinant protein (NP_060543) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the tripartite motif-containing protein family, whose members are characterized by a "really interesting new gene" (RING) finger domain, a zinc-binding B-box motif, and a coiled-coil region. Members of this family function as E3 ubiquitin ligases and are involved in a broad range of biological processes. This gene regulates the activation of nuclear receptors, such as androgen receptor, and has been implicated in development of prostate cancer cells, where its expression increases in response to a downregulation of microRNAs. In addition, this gene participates in viral defense regulation as a negative regulator of interferon-beta. Alternative splicing results in multiple transcript variants.
