

Recombinant Human CD74 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CD74-1892H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CD74 MS Standard C13 and N15-labeled recombinant protein (NP_001020330) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene associates with class II major histocompatibility complex (MHC) and is an important chaperone that regulates antigen presentation for immune response. It also serves as cell surface receptor for the cytokine macrophage migration inhibitory factor (MIF) which, when bound to the encoded protein, initiates survival pathways and cell proliferation. This protein also interacts with amyloid precursor protein (APP) and suppresses the production of amyloid beta (Abeta). Multiple alternatively spliced transcript variants encoding different isoforms have been identified.
