

Recombinant Human PPP1R8 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PPP1R8-1897H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PPP1R8 MS Standard C13 and N15-labeled recombinant protein (NP_612568) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene, through alternative splicing, encodes three different isoforms. Two of the protein isoforms encoded by this gene are specific inhibitors of type 1 serine/threonine protein phosphatases and can bind but not cleave RNA. The third protein isoform lacks the phosphatase inhibitory function but is a single-strand endoribonuclease comparable to RNase E of E. coli. This isoform requires magnesium for its function and cleaves specific sites in A+U-rich regions of RNA.
