

Recombinant Human PDCD10 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PDCD10-2026H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PDCD10 MS Standard C13 and N15-labeled recombinant protein (NP_009148) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes an evolutionarily conserved protein associated with cell apoptosis. The protein interacts with the serine/threonine protein kinase MST4 to modulate the extracellular signal-regulated kinase (ERK) pathway. It also interacts with and is phosphorylated by serine/threonine kinase 25, and is thought to function in a signaling pathway essential for vascular development. Mutations in this gene are one cause of cerebral cavernous malformations, which are vascular malformations that cause seizures and cerebral hemorrhages. Multiple alternatively spliced variants, encoding the same protein, have been identified.
