

Recombinant Human NUDT4 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. NUDT4-2144H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	NUDT4 MS Standard C13 and N15-labeled recombinant protein (NP_061967) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene regulates the turnover of diphosphoinositol polyphosphates. The turnover of these high-energy diphosphoinositol polyphosphates represents a molecular switching activity with important regulatory consequences. Molecular switching by diphosphoinositol polyphosphates may contribute to regulating intracellular trafficking. Several alternatively spliced transcript variants have been described, but the full-length nature of some variants has not been determined. Isoforms DIPP2alpha and DIPP2beta are distinguishable from each other solely by DIPP2beta possessing one additional amino acid due to intron boundary skidding in alternate splicing.
