

Recombinant Human AHSG Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. AHSG-2173H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	AHSG MS Standard C13 and N15-labeled recombinant protein (NP_001613) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a negatively-charged serum glycoprotein that is synthesized by hepatocytes. The encoded protein consists of two polypeptide chains, which are both cleaved from a proprotein encoded from a single mRNA. It is involved in several processes, including endocytosis, brain development, and the formation of bone tissue. Defects in this gene are a cause of susceptibility to leanness.
