

Recombinant Human IL16 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. IL16-2174H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	IL16 MS Standard C13 and N15-labeled recombinant protein (NP_004504) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a pleiotropic cytokine that functions as a chemoattractant, a modulator of T cell activation, and an inhibitor of HIV replication. The signaling process of this cytokine is mediated by CD4. The product of this gene undergoes proteolytic processing, which is found to yield two functional proteins. The cytokine function is exclusively attributed to the secreted C-terminal peptide, while the N-terminal product may play a role in cell cycle control. Caspase 3 is reported to be involved in the proteolytic processing of this protein. Alternate splicing results in multiple transcript variants.
