

Recombinant Human DAB1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. DAB1-2325H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	DAB1 MS Standard C13 and N15-labeled recombinant protein (NP_066566) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The laminar organization of multiple neuronal types in the cerebral cortex is required for normal cognitive function. In mice, the disabled-1 gene plays a central role in brain development, directing the migration of cortical neurons past previously formed neurons to reach their proper layer. This gene is similar to disabled-1, and the protein encoded by this gene is thought to be a signal transducer that interacts with protein kinase pathways to regulate neuronal positioning in the developing brain.
